## INFRARED ASPHALT HEATER MIRA-1

The Polish company "Trade Industrial Company AB" /TICAB/ producing and selling asphalt road repair and maintenance equipment

The equipment of our production is operated in 51 countries of the world, receiving positive feedback from users.

This equipment is intended for preparing the surface of the asphalt pavement for the restoration process in the case of small pothole repairs. Infrared heat warms up (dries) and effectively softens the road map for 5-7 minutes, while not impairing the properties of the asphalt (the bitumen does not burn out).

A reliable lightweight device with a unique transformable design. An indispensable assistant when repairing asphalt around manholes, wells, or in other hard-to-reach places. Easy to move thanks to self-steering heat-resistant wheels and comfortable handles. Recommended for small volumes of work. It can also be used to prepare asphalt surfaces when applying road markings.

### CHARACTERISTICS:

Productivity of the installation - 80-110 m<sup>2</sup> of pothole repair per shift

Fuel – propane

The working dimensions of the heated area are 2 zones of 100x60 cm

Transit dimensions - 170x140x80 cm

Management is mechanical

Consumption -4.5-5.5 kg/g (depending on the temperature environment)

Weight without cylinders - 120 kg

**Price- 3700 euro netto**

**we have in stock**
